

CLOSED CRANKCASE VENTILATION FILTER SYSTEMS

The most efficient emissions control system available when used with AZ Purimuffler™

Closed crankcase Ventilation Filter systems (CCVs) from CDTi offer an effective solution to reduce contaminated crankcase emissions. Our CCV systems remove contaminated crankcase emissions - providing protection for your engine and the surrounding environment.

Contaminated crankcase emissions pose a serious problem for diesel engine owners. These emissions result from gas escaping past piston rings into the crankcase, where they are contaminated with oil mist, water, etc. These contaminated emissions escape through the engine breather into the engine compartment where they can enter the engine intake system or exit into the external environment.

Crankcase emissions coat the inside of engine compartments / rooms – fouling expensive components as well as increasing cleanup and related costs. These crankcase emissions not only pollute the air and the surrounding areas, they contribute to increased maintenance costs and can shorten the life of engine components.

When used in conjunction with the AZ Purimuffler™ system, CCVs from CDTi are EPA-verified - efficiently and economically reducing pollutants from diesel applications by up to 40%*.

CCVs from CDTi improve the dependability of your engine and air quality of passenger compartments as well as those working in the vicinity of stationary diesel-powered equipment.

Easily installs with minimum hassle and compact size

- Prevents clogging of engine intakes, turbochargers and intercoolers.
- Intuitive pop-up red indicator when maintenance is required
- More efficient than other products available on the market
- “Green” element is completely burnable and crushable
- Helps improve air quality in the immediate environment.
- EPA-verified technology – reducing pollutants up to 40%.*
- Trusted by major equipment OEMs worldwide

CDTi supplies proven emissions control systems and parts to industries such as shipping, mining, construction, on-highway, and power generation. To find out more about our complete product line, please feel free to visit our website or contact us directly.
